This course provides a detailed overview of the impact of the global economy on domestic politics. Much of the newspaper is devoted to foreign affairs from terrorism to trade treaties. However, global forces impact all forms of politics, not just those we traditionally think of as ‘foreign policy’. For example, US labor markets are highly dependent on cheap immigrant labor, the housing market is (or was…) financed by cheap foreign capital, and Walmart is dependent on cheap foreign resources to keep prices ‘everyday’ low. Both the 2008 primaries and general election were dominated by discussion of trade policy (Obama and Clinton on NAFTA) and financial policy (Obama and McCain on the bailout) as were the 2010 midterms (deficits and the bailout) – thus complicated economic issues had major electoral consequences. This course will help you understand how the ever more complex global market impacts politics from the international to the local level. You will, I hope, become educated consumers of economic news, and be able to link it clearly to your own political preferences and those of other citizens in the US and abroad.

The course splits into two sections. We begin the first section by considering the global market from a historical perspective – from its modern genesis in the late nineteenth century through to the current economic crisis sweeping across the globe. The second section examines how scholars have attempted to explain these historical patterns. We do this by breaking down globalization into trade, finance, development, and migration – looking at both explanations that focus on interactions among states as well as those that examine the behavior of politicians, businesses and citizens.

In terms of course requirements, there will be a midterm worth 33% of the course grade on March 10th and a final exam, worth 67%, on May 14th. Before each exam I will hold a review session. Almost all the readings, save a couple of newspaper articles, are in the assigned books. I reserve the right to assign extra readings, links to which will be posted on the Moodle website.

Books Required for Purchase

Frieden, Jeffry, *Global Capitalism: Its Fall and Rise in the Twentieth Century.*

Raghuram, Rajan, *Fault Lines: How Hidden Fractures Still Threaten the World Economy*

Oatley, Thomas, *International Political Economy*

**Website:** [https://moodle.umn.edu/course/view.php?id=16780](https://moodle.umn.edu/course/view.php?id=16780)
